

European Petition www.atomstopp.com

Under the title "a million Europeans demand the exit of nuclear power", many associations, trade unions and European groups start a petition campaign all over the European Union starting on April 26, 2004, the anniversary of the Chernobyl disaster.

The goal is to collect a million signatures to convince the European countries to take the following measures without delay :

- to stop or prevent the construction of new nuclear power plants and facilities in the European Union,
- to launch a plan to abandon nuclear power within the European Union,
- to invest massively in energy saving and the development of renewable energies,
- to repeal the Euratom Treaty which massively supports nuclear power in Europe by means of public funding.

Only these measures will make it possible to fight against nuclear danger and global warming at the same time.

Signatures will be collected from april 26, 2004 until april 26, 2006

The result of the petition will be published during a great event that will take place between now and April 26, 2006.
